

MAIN HALL HEATING

The Main Hall is heated by four hot water fan convector heaters.

The boiler is on permanently and the temperature is controlled within the heater. We will adjust this as we gain experience of the system.

If the hall is too hot you can turn off the heaters using the mains switch to the left of each heater.

Conversely if it is cold and the heaters are off just turn on the mains switch.

Don't forget to turn on the destratification fans.
